# JEChat, a chat created with ReactJS

Description: This application is a Web Chat application that was written using the Javascript Full Stack: HTML, CSS, JavaScript, ES6 and beyond, React Js, React router, Redux, Redux thunk, jQuery, Bootstrap, Node.js, Express, MongoDB, Mongoose, LESS, SASS, AJAX, JSON, Git, RequireJS, npm, yarn, Socket.IO, Mocha, Chai and Jest.

Next is the main window of the application:

If you don't actually have a user, it is easy so create one, just click on the Registration button and the next window will appear:

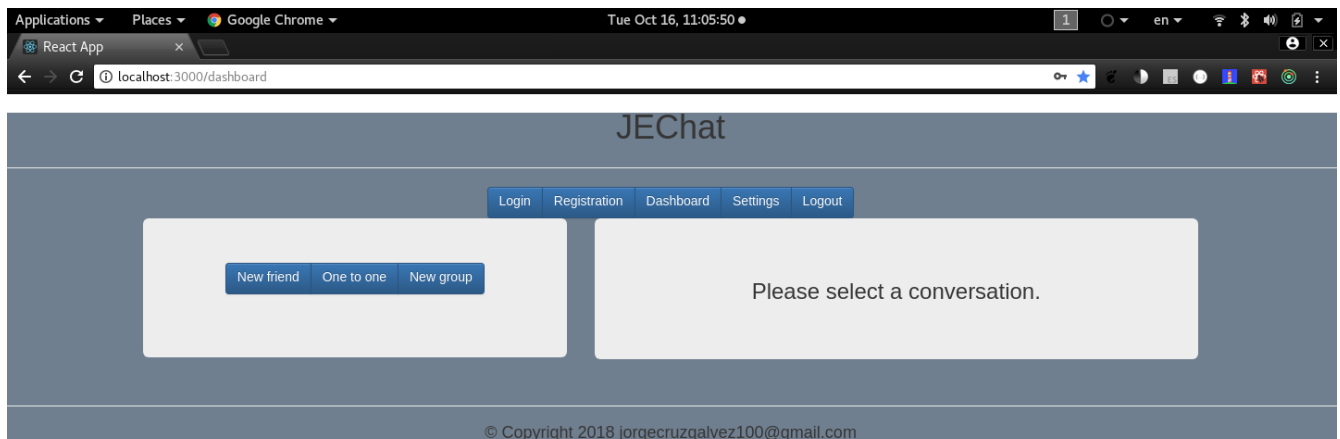

Here just enter your full name, your e-mail account and select a password. Once filing these requirements, click over Register and your new account will be created.

Once you have an account, click over the Login button and it will show the next screen:
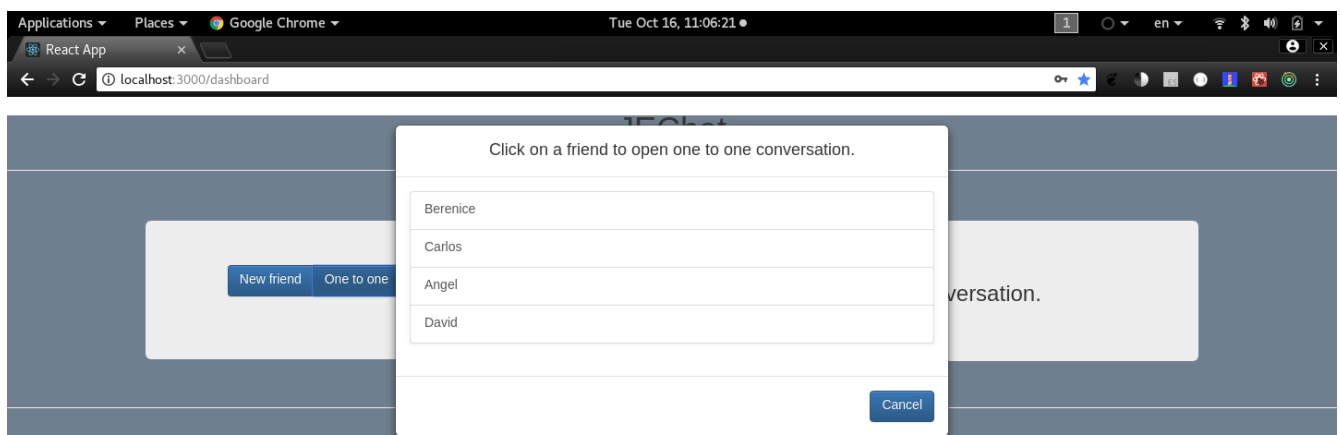

Type here your e-mail and password, and after the Sing in button and you will be able to go to the Dashboard to chat with a friend.

Once you click over Dashboard, the chat window will appear, and you will be able to chat in One to One or in Group conversations.

If you decide to chat in One to One way, just select the person you want to chat with.

And that is it, you can just begin to type messages that your friends will see in real time.
